

## 2020 Conference Announcement Neonatal, Pediatric and Family Medicine

**Nashwa Mohamed Baha El Din\***

Department of Pediatrics, Cairo  
University, Egypt

### Abstract

Neonatal Pediatric and Family Medicine: Like many other systems in the body, the immune system is not fully developed and functional at birth and therefore infants and children are at a higher risk of developing infections. At the same time, the act of being born – moving from the sterile environment of the womb to the wider world, exposes us to a whole range of pathogens that we have never encountered and have no protection against.

## Introduction

Neonatal Pediatric and Family Medicine: Like many other systems in the body, the immune system is not fully developed and functional at birth and therefore infants and children are at a higher risk of developing infections. At the same time, the act of being born – moving from the sterile environment of the womb to the wider world, exposes us to a whole range of pathogens that we have never encountered and have no protection against. In modern medical ethics, patient autonomy is considered a major principle in making decisions about an individual's health, and those who receive healthcare should have the right to practice their autonomy consciously and freely, Neurology deals with the diagnosis and treatment of all categories of conditions and disease involving the central and peripheral nervous systems (and their subdivisions, the autonomic and somatic nervous systems), including their coverings, blood vessels, and all effector tissue, such as muscle.
