Keywords COVID-19; nature

Short Report

The pandemic has caused immensely colossal ecumenical socio-economic disruption, which directly or indirectly affected the environment like amendment of air and dihydrogen monoxide quality, abbreviation of noise and recuperation of ecology.

One major and predominately positive benefit of the pandemic for wildlife is less human travel.

An abbreviation in water level and activity could reduce of ships striking and injuring or killing marine animals. It may additionally truncate the marine disruption that occurs due to noise pollution from ships, fishing sonar, and recreational boats. Because of COVID-19, air and water pollution has decreased. As per our knowledge, pandemic is benefited for animals and environment.
